Human cell cycle and proliferation proteins and polynucleotides are used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer

Claim 5; Page 190-191; 205pp; English

Sequences AAF5950-AAF59643 represent cDNAs encoding 54 human cell cycle and proliferation proteins (CCYPR), AAB60453-AAB60506.
CCYPR and agonists of CCYPR are used to treat diseases or conditions associated with decreased expression of functional CCYPR, while CCYPR and associated with decreased expression of functional CCYPR, while CCYPR and associated with overexpression of functional CCYPR, Monoclonal or polyclonal antibodies to CCYPR may be used in enzyme-linked immunosorbent associated with compounds e.g., antibodies, oligonucleotides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that modulate the activity of CCYPR. CCYPR nucleotides can be used to generate transgenic animal models of human disease, and can be used in gene therapy in target cells with genetic abnormalities with respect to the expression of CCYPR. Diseases which can be diagnosed, treated and prevented using CCYPR. proteins, nucleic acids, agonists or antagonists include immune, developmental and cell signalling disorders, and cell proliferative disorders including cancer. Specific examples of these disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, allergies, diabetes mellitus, disorders of the menstrual cycle and infections

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous siyetem, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, and as lateral sed neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and infammation, leukaemias and C.N.S disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               287

                                                                                                                                    The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosting or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, oronnary arteriosolerosis and myocardial ischaemia), neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders, pulmonary disorders, reproductive disorders, proliferative disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                       Cardiant; antiarrhythmic; antiarteriosclerotic; vasotropic; cytostatic; vulnerary; antiinflammatory; nootropic; neuroprotective; antiparkinsonian; gene therapy; human; cardiovascular disorder;

(HUMA-) HUMAN GENOME SCI Ruben SM WPI; 2003-029900/02 P-PSDB; ABR00141. Rosen CA,

ABZ71190-ABZ7147B represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP0029 represent the proteins they encode. ABZ71479-ABZ714 represent human secreted proteins they encode. ABZ71479-ABZ71540 represent human secreted proteins described by the secreted proteins and encompasses antibodies specific for the secreted proteins. The rectors and host cells computising a mucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody frequents specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliocating or preventing digestive disorders. Such conditions include disorders of the mouth, companies, stomach, small intestine, large intestine, liver, biliary tract and pancreas, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the reatment of immune disorders, inflammation, infection, chromosome control samples, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute markers. The present sequence represents a human secreted protein-markers. The present sequence represents a human secreted protein-markers. The present sequence represents a human secreted protein-markers. New human secreted proteins and nucleic acids, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating e.g. gastrointestinal diseases and disorders, or cancers Claim 21; Page 834-835; 1216pp; English

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB80040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are established from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, (c) cardiovascular disorders such as myocardial schaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parastic infections.

(d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parastic infections.

(E) Wote: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. WiPo int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        251

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral as Calerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nootropic; immunosuppressant; cytostatic; gene therapy; cancer;

Human; foetal brain; foetal kidney; melanoma; testis; amygdala; gene therapy; chromosome 22q13.31-13.33; ss. Human transmembrane protein cDNA clone amy2_li14.

25-APR-2000; 2000US-199380P. 25-APR-2001; 2001WO-IB02050

fetal genetic Human cDNA sequences and clones derived from human fetal brain, kidney, melanoma, testis and amygdala cDNA libraries, useful in screening and therapy -

Claim 1; Page 128-129; 611pp; English.

arrays $^{\text{the}}$ from The present invention describes assemblages and computer readable comprising novel human cDNA sequences and clones derived from huma foetal brain, foetal kidney, melanoma, testis and amygdlaa cDNA libraries. ABA93702 to ABA9376 represent human cDNA sequences from present invention which encode the proteins given in ABB0562 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large of human genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            929
primitive HSCs (PHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins (see AAY79176-93) are growth factors, transcription factors, splicing factors, capping factors transport proteins, translation factors or replication factors that modulate HSC activity, especially differentiation or replication. The invention provides a claimed method for identifying PHSC-specific nucleic acids involving: creating a PHSC cDNA library and a non-PHSC immune cell library; and subtracting the 2 libraries. Also claimed are methods: for generating a stem cell/progenitor cell-from PHSCs; for identifying the presence of a PHSC in a sample; for identifying the presence in a sample of a compound that modulates HSC activity; for using such a compound to creat an immune system condition, especially leukaemia; for introducing exogenous nucleic acid into a HSC; and for ex vivo expansion of HSCs. Also claimed is a PHSC specifically expressing 1 ceptanied nucleic acids, such as the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

detecting an angiogenesis-associated transcript in a cell in the pratient. The method involves contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polymucleotide sequences given in the specification. These angiogenesis-associated polymucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue cundergoing angiogenesis. The method and the polymucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polymucleotide sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polymucleotide caquences are useful as a vaccine for therapeutic and prophylactic immunisation. ABX08739-ABX08853 represent angiogenesis-associated immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               881 GGTTGGTTTGAGGAAGGGATGAAGCTGGAGGCCATTGACCCCCTGAATCTGGGCAACATC 740

polypeptide encoded by a polymucleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II).

(I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's bloidgical sample professed in a patient with (IV), detecting the amount of polymucleotide hybridising to (IV), and comparing the amount to patient where the amount of polymucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PRR). (I) comprising catected preferably by polymerase chain reaction (PRR). (I) comprising contecting for an ovarian tumour protein comprising contacting T cells with (III) or (II) is useful for stimulating and/or expanding T cells with (III) or (III) is useful in design and preparation of the tumour polypeptides and proteins in tumour cells and to isolate a full length gene from a contacting term of contacting the contacting to contact the contact of the tumour polypeptides and proteins in tumour cells, and to isolate a full length gene from a contact of the contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of contact of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent which result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Endress G, Horrigan

             This invention describes novel human nucleic acid segments (I) containing polymorphic sites. The polymucleotides of (I) are used for, e.g. correlating disease polymorphisms (or disease succeptibility) or other phenotypic traits (e.g. baldness, obssity, fertility, strength, response to drugs etc.); diagnosing and monitoring e.g. cancer, inflammation, heart or central nervous system diseases; detecting susceptibility to microbial infection; treating or preventing such diseases; forensic analysis; gene therapy; paternity testing; mapping genomic loci associated with phenotypic traits (and subsequent cloning
                                                                                                                                                        of the genes responsible), and the production of transgenic organisms. Antibodies raised against (I) are useful as diagnostic and therapeutic tools and in drug screening. AAH85144 - AAH87644 represent the human DNA sequences containing blailelic polymorphic sites described in the
                                                                                                                                                                                                                                                                                                                                                 2180 TTTGTGAGGACTGACTCCC--ATTTCCTAAAGGAAATGCCCCCGGGGGAGGACATTGGGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              621
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             726
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCTGTGTGGA----CGGGGGGCCCTCCACAGATGGCTTGGACTGGTTCTGCTACCATGCCT 843
                                                                                                                         capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                            WIPO
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1375 Gracaagacriggaagacrirrcrggriggacdrirarccggagccgcacccrc

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2622 r-gaggacgargcanarcgagrigriraagargaacrrcaccrrcgaggaaracraca

Identifying gene signatures in 3'-directed human cDNA library for diagnosis of abnormal cell function, by preparing cDNA that reflects relative abundance of corresp. mRNA in specific human tissues

Claim 1; Page 1414; 2245pp; Japanese

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mNA is Claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the

3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                         1679 GGGTCTCCTGGGACCCGCCTGTTGCTTCTCCCCTCTGTGGAAAGGTCTATATGACGG

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan, construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'-& 3'-end one pass sequencing: RAB,
HRI, and Bictechnology Center, National Institute of Technology and
Evaluation, clone selection for full insert sequencing: RAB and
HRI.
                                          AKO56443 3188 bp mRNA linear PRI 01-AUG-2002 Homo sapiens cDNA FLJ31881 fis, clone NT2RP7002829, weakly similar to Scm-related gene containing four mbt domains.
